

Finished grinding rods

Heat-treated rod supply for your rod mill

JOTAIN supplies heat-treated grinding rods with straightening, fixed-length cutting, inspection, marking and export packing. 65Mn is the main published material choice. Alternative materials require separate technical review. Agree the specification for the finished rod intended for the named mill.

01

Your enquiry

Fill in the information available. Mark open items "to be agreed".

Company / contact

Mill identification and application

Rod diameter x ordered length, units and quantity

Current material / required grade and standard

Destination and requested delivery date

Complete page 2 for inspection requirements and trial planning.

Save a copy after filling. Use additional sheets for longer details.

Finished grinding rods

Inspection and trial requirements

02 Add the requirements you already have

Mill effective working length / rod fit requirements

Diameter and length tolerances / straightness requirements

Hardness range, method, test positions and sampling

Lot identification and required inspection documents

Bundle size, marking and packing requirements

Attachments and unresolved items

03 If a trial is planned

Current consumption / breakage / bending issue

Available operating baseline and period

Proposed trial quantity / comparison period

Plant engineer responsible for trial review

Start with the available information and mark open items "to be agreed". Before a trial, agree rod fit, operating records and acceptance criteria with the plant or its appointed engineer. Existing records or a single trial do not establish performance in other mills or operating conditions.

This blank checklist contains no inspection or trial results. The offered specification, documents and schedule must be stated in the quotation.

PREPARE AND RETURN

Rod inspection and traceability

Trial ledger and Excel template
